Google Nearby Notifications

---

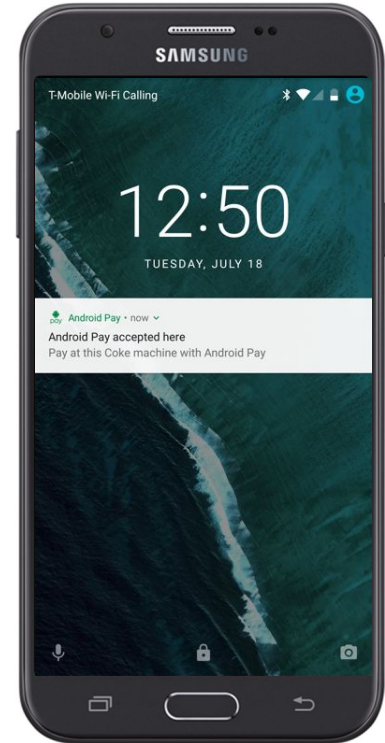

Nearby Notifications help businesses reach their customers, **with no prior app install required**, with relevant messaging when they are in proximity to them or their physical location.

- “Nearby” utilizes Bluetooth beacon technology to initiate messaging
- Messaging is triggered via the beacon based on location

## What are Nearby Notifications?

- No prior app install required
- Reaches Android users (60% of population) with Bluetooth and Notifications turned on
- Messages can be customized with text and a URL
- Notification sent to mobile phones when they are in close proximity to the beacon
- Used to drive mobile engagement

## Benefits of Nearby Notifications

### Encourage shoppers to:

- Download your app
- Engage on social media
- Learn more about your company/product/property
- Visit your booth/location
- Fill out a survey, check-in, and/or submit a review

## Types of Beacons Used for Nearby

### RadBeacon Dot:

- Battery-operated (approximately 6 month lifetime)
- Range: 5-50m
- Portable
- On/Off button
- Great for use on-the-go

### RadBeacon USB

- USB powered (unlimited lifetime)
- Plug into wall or computer (any power source)
- Range: 5-35m
- Stationary or portable
- Great for use at a recruiting station

## Google Nearby is ideal for:

- Storefronts
- Recruiting
- Service providers
- Real estate agents
- Events/Conferences

## Best Practices and things to avoid

### Best Practices:

- Tell them why they are receiving the message
- Attach custom links
- Instruct user to take action
- Personalize the message

### Avoid:

- Including any personally identifiable information
- Targeting your users at too many locations during a short time
- Adopting a one-size-fits-all strategy

## Radius Networks Appless Platform

After placing your order, you will receive a RadBeacon USB or Dot with a website, ID, and Activation Code on the label.

# Setting Up Your Beacon

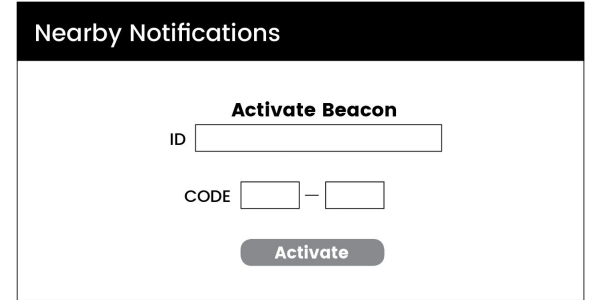

1. Go to:

<https://director.radiusnetworks.com/nearby/activate>

2. Enter your designated beacon ID and Code.

3. Activate your beacon(s)

4. Click to edit your beacon message
